HTC S621 Easy Email Setup
(For ISP (Rogers.com, Telus.net, Videotraon.ca) e-mail service)

ATTENTION: Yahoo email requires paid subscription to premium service (Yahoo! Mail Plus)

Rogers makes setting up your wireless e-mail service quick and easy.
Before beginning, please ensure you have everything you need to begin enjoying the time-saving benefits and convenience of sending and receiving wireless e-mail on the go.

Wireless E-mail Checklist:
☑ E-mail-capable wireless device   ☑ E-mail Plan   ☑ ISP-based E-mail Address

STEP 1   **Insert the SIM card and the battery into your wireless device**
- Charge your device for 20 minutes

STEP 2   **Turn on your wireless device**
- Ensure EDGE or GPRS appears on screen (indicates device is connected to the Rogers wireless network)

STEP 3   **Set up your wireless e-mail service**
- Follow these steps for ISP e-mail:

1. Press **Start** and scroll to **Messaging**.
2. Select **New Account**.
3. Under Your e-mail provider, select Other **(POP3/IMAP)**.
4. Enter your name.
5. Enter your ISP e-mail address (example: user@rogers.com).
6. Check the box that says **Attempt to obtain e-mail settings from the Internet** and select **Next**.
7. In the Auto Setup screen, wait until the status changes from **Connecting** to **Finished** and select **Next**.
8. Enter your e-mail user name.
9. Enter your password.
10. Leave **Domain** blank.
11. Check **Save password**, so you don't have to enter it every time you check e-mail and select **Next**.
12. Make sure that **Server Type** is set to **POP3** and select **Next**.
13. Depending on the ISP email you are setting up, enter the following settings:

   a. For **Rogers**:
      I. Make sure that **Incoming Server** is set to **pop.broadband.rogers.com**.
      II. Where it says, **Require SSL connection**, select **No** (uncheck box).
      III. Make sure **Outgoing Server** is set to **smtp.rogerswirelessdata.com**
      IV. Where it says, **Outgoing server requires authentication**, select **No** (uncheck box).

   b. For **Yahoo**:
      I. Make sure that **Incoming Server** is set to **pop.yahoo.ca**
      II. Where it says, **Require SSL connection**, select **No** (uncheck box).
      III. Make sure **Outgoing Server** is set to **smtp.rogerswirelessdata.com**
      IV. Where it says, **Outgoing server requires authentication**, select **No** (uncheck box).

c. For **Telus**:
  I. Make sure that **Incoming Server** is set to **pop.telus.net**.
  II. Where it says, **Require SSL connection**, select **No** (uncheck box).
  III. Make sure **Outgoing Server** is set to **smtp.rogerswirelessdata.com**
  IV. Where it says, **Outgoing server requires authentication**, select **No** (uncheck box).

d. For **Videotron**:
  I. Make sure that **Incoming Server** is set to **pop.videotron.ca**.
  II. Where it says, **Require SSL connection**, select **No** (uncheck box).
  III. Make sure **Outgoing Server** is set to **smtp.rogerswirelessdata.com**
  IV. Where it says, **Outgoing server requires authentication**, select **No** (uncheck box).

14. Change preference settings (ie: how often e-mail should be checked) as appropriate and select **Next**.
15. Select **Finish**.
16. Select **Yes** to confirm that you would like to download mail for this new account now.

STEP 4 **Send e-mail on the device**
- On your device, select **Menu**, then select **Send / Receive**
